Citizenship: Singaporean

|           |   |              |
|-----------|---|--------------|
| EDUCATION | <b>Computer Science Department, Carnegie Mellon University</b>  | 2017-present |
|           | Ph.D. Student, Computer Science<br>Fields: Artificial Intelligence, Machine Learning, Game Theory.<br>Advisors: J. Zico Kolter, Fei Fang  |              |
|           | <b>National University of Singapore (NUS)</b>   | 2011-2015    |
|           | B.Eng.(Hons), First Class, Computer Engineering, GPA: 5.0/5.0<br>Minor in Mathematics, Exchange Program to HKUST.   |              |
| RESEARCH  | <b>Research Assistant, Department of Computer Science, NUS</b>  | 2017         |
|           | Project: <i>Network Anomaly Detection</i><br>Applied statistics and machine learning to cluster and identify potential anomalies in unlabelled netflow data.  |              |
|           | <b>Signal Processing Lab, DSO National Laboratories</b>   | 2015-2016    |
|           | Projects: <i>Computer Vision, Image Processing, Machine Learning, Optimization</i><br>Applied machine learning and signal processing techniques for object detection, segmentation, image and video enhancement and super-resolution. System administrator for the lab.   |              |
|           | <b>Honors Dissertation, NUS</b>   | 2014-2015    |
|           | Project: <i>Planning and Learning in Spatiotemporal Environmental Phenomena</i><br>Formulated, analyzed and evaluated the Gaussian Process Planning framework, a novel non-myopic, Bayes-adaptive model-based planning framework with applications in Bayesian Optimization and Active Learning. Published in AAAI '16. |              |
|           | <b>Undergraduate Part-time Research Assistant, NUS</b>  | 2014         |
|           | Project: <i>Point Cloud Registration</i><br>Performed feature extraction used to align noisy point clouds obtained via Structure from Motion. Experimented with standard LIDAR datasets and attempted to reproduce results on noisy point clouds obtained using SfM.  |              |
|           | <b>Undergraduate Research Opportunities Programme, NUS</b>  | 2013-2014    |
|           | Project: <i>Computational intelligence for MRI image segmentation</i><br>Studied Markov random fields and experimented with t-mixture models to improve robustness in brain tumour segmentation.  |              |
|           | <b>Research Intern, Centre for Strategic Infocomm Technologies</b>  | 2014         |
|           | Project: <i>Static Analysis of Binary Executables</i><br>Investigated and proposed methods to perform automatic function and instruction matching of x86 assembly code, in the absence of function symbols. Wrote tools to distinguish between code and data in disassembled binaries.                                  |              |
| AWARDS    | <b>DSO National Laboratories</b>  |              |
|           | KiNETIC and Group accomplishment award for a classified project.  | 2016         |
|           | <b>National University of Singapore</b>   |              |
|           | Valedictorian for the class of Computer Engineering graduates.  | 2015         |
|           | IES Gold Medal. Top graduating student.   | 2015         |
|           | Lee Kuan Yew Gold Medal. Best graduate through the course of study.   | 2015         |
|           | DSTA Gold Medal. Best final year student for Computer Engineering.  | 2015         |
|           | NUS Faculty Scholarship.  | 2011-2015    |

|                               |  |             |
|-------------------------------|--|-------------|
|                               | Deans List for Semesters 1 through 6. Amongst top 5 % of students.   | 2011-2014   |
|                               | Alcatel Lucent Telecomm. Award. Best performance in a class for Networks.  | 2014        |
|                               | Top 2 Term Project for the class 'AI Planning and Decision Making'.  | 2014        |
|                               | Micron Prize. Top 2nd year student.  | 2012        |
|                               | Finalist in NUSACM iCode intra-college algorithmic programming competition.  | 2012        |
| <b>PUBLICATIONS</b>           | <b>Chun Kai Ling</b> , Kian Hsiang Low, and Patrick Jaillet. Gaussian Process Planning with Lipschitz Continuous Reward Functions: Towards Unifying Bayesian Optimization, Active Learning, and Beyond. (AAAI '16) |             |
| <b>WORKSHOP AND PREPRINTS</b> | <b>Chun Kai Ling</b> , J. Zico Kolter, Fei Fang. What game are we playing? Differentiably learning games from incomplete observations. (NIPS '17 Deep Reinforcement Learning Symposium)                            |             |
| <b>PRESENT</b>                | <b>Working Papers</b><br>1. Differentiably learning games from incomplete observations<br>2. Scoring Rules for Adaptive Multi-stage Questions  |             |
|                               | <b>Teaching Assistant</b><br>Artificial Intelligence Methods for Social Good (08-737)  |             |
|                               |  | Spring 2018 |
| <b>COURSEWORK</b>             | 1. Analytical Performance Modeling (15-857)  | Fall 2017   |
|                               | 2. Fundamentals of Learning from the Crowd (10-709)  | Fall 2017   |
| <b>OTHER EXPERIENCE</b>       | <b>Software Engineering Intern, Graymatics</b>   |             |
|                               | Wrote tools to speed up machine learning pipelines. Contributed to the implementation of a image-sharing social media platform. Wrote a desktop application to help end-users organize digital media.              |             |
|                               | <b>Temporary Administrative Assistant, Health Promotion Board</b>  |             |
|                               | <b>Temporary Tax Officer, Inland Revenue Authority of Singapore</b>  |             |
|                               | <b>Air Defence Weapon Operator, 160 Squadron</b>   |             |
|                               |  | 2013        |
|                               |  | 2012        |
|                               |  | 2011        |
|                               |  | 2009-2011   |
| <b>HOBBIES</b>                | ProjectEuler. Hackerrank. Recreational Math. Chinese Chess. Starcraft.   |             |
